*Breeding bird evidence is as per Ontario Breeding Bird Atlas evidence codes.

STATUS LEGEND

GRank - (GRANK) Global ranks are assigned by a consensus of the network of CDCs, scientific experts, and The Nature Conservancy to designate a rarity rank based on the range-wide status of a species, subspecies or variety.

G1- Extremely rare; usually 5 or fewer occurrences

G2 -Very rare; usually between 5 and 20 occurrences

G3 -Rare to uncommon; usually between 20 and 100 occurrences;

G4 -Common; usually more than 100 occurrences

G5 -Very common; demonstrably secure under present conditions.

GH -Historic, no records in the past 20 years.

GU -Status uncertain, often because of low search effort or cryptic nature of the species; more data needed.

GX -Globally extinct. No recent records despite specific searches.

? -Denotes inexact numeric rank (i.e. G4?).

"G" (or "T")- followed by a blank space means that the NHIC has not yet obtained the Global Rank from The Nature Conservancy.

G? -Unranked, or, if following a ranking, rank tentatively assigned (e.g. G3?).

Q -Denotes that the taxonomic status of the species, subspecies, or variety is questionable.

T -Denotes that the rank applies to a subspecies or variety.

SRank –Status assigned by the NHIC for the Province of Ontario boundary

S1- Critically Imperiled

S2- Imperiled

S3 -Vulnerable

S4 -Apparently Secure

S5 -Secure

SE – Exotic

SZB - Breeding migrants/vagrants.

SZN- Non-breeding migrants/vagrants.

SRANK Definition

SX Presumed Extirpated—Species or community is believed to be extirpated from the nation or state/province. Not located despite intensive searches of historical sites and other appropriate habitat, and virtually no likelihood that it will be rediscovered.

SH Possibly Extirpated (Historical)—Species or community occurred historically in the nation or state/province, and there is some possibility that it may be rediscovered. Its presence may not have been verified in the past 20-40 years. A species or community could become NH or SH without such a 20-40 year delay if the only known occurrences in a nation or state/province were destroyed or if it had been extensively and unsuccessfully looked for. The NH or SH rank is reserved for species or communities for which some effort has been made to relocate occurrences, rather than simply using this status for all elements not known from verified extant occurrences.

S1 Critically Imperiled—Critically imperiled in the nation or state/province because of extreme rarity (often 5 or fewer occurrences) or because of some factor(s) such as very steep declines making it

especially vulnerable to extirpation from the state/province.

- S2 Imperiled**—Imperiled in the nation or state/province because of rarity due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors making it very vulnerable to extirpation from the nation or state/province.
- S3 Vulnerable**—Vulnerable in the nation or state/province due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors making it vulnerable to extirpation.
- S4 Apparently Secure**—Uncommon but not rare; some cause for long-term concern due to declines or other factors.
- S5 Secure**—Common, widespread, and abundant in the nation or state/province.
- SNR Unranked**—Nation or state/province conservation status not yet assessed.
- SU Unrankable**—Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.
- SNA Not Applicable**—A conservation status rank is not applicable because the species is not a suitable target for conservation activities.
- S#S# Range Rank**—A numeric range rank (e.g., S2S3) is used to indicate any range of uncertainty about the status of the species or community. Ranges cannot skip more than one rank (e.g., SU is used rather than S1S4).

Additional older Srankings being replaced in 2006

SRANK Definition

- C Captive/Cultivated**; existing in the province only in a cultivated state; introduced population not yet fully established and self-sustaining.
- S? Not Ranked Yet**; or if following a ranking, Rank Uncertain (e.g. S3?). S? species have not had a rank assigned.
- SA Accidental**; of accidental or casual occurrence in the province; far outside its normal range; some species may occasionally breed in the province.
- SAB Breeding accidental.**
- SAN Non-breeding accidental.**
- SE Exotic**; not believed to be a native component of Ontario's flora.
- SR Reported for Ontario**, but without persuasive documentation which would provide a basis for either accepting or rejecting the report.
- SRF Reported falsely from Ontario.**
- SX Apparently extirpated from Ontario**, with little likelihood of rediscovery. Typically not seen in the province for many decades, despite searches at known historic sites.
- SZ Not of practical conservation concern** inasmuch as there are no clearly definable occurrences; applies to long distance migrants, winter vagrants, and eruptive species, which are too transitory and/or dispersed in their occurrence(s) to be reliably mapped; most such species are non-breeders, however, some may occasionally breed.
- SZB Breeding migrants/vagrants.**
- SZN Non-breeding migrants/vagrants.**

COSEWIC (Committee on the Status of Endangered Wildlife in Canada):

END – Endangered

THR – Threatened

SC – Special Concern

OMNR (Ontario Ministry of Natural Resources):

END – Endangered

THR – Threatened

SC – Special Concern

Regional Status

W - Regionally Significant (Waterloo Region 1996)
